-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-10 are rejected under 35 U.S.C. 102(a) or (b) as being anticipated by Xun (US 6,287,510). Xun discloses a method of making honeycomb shaped ceramic articles. The method comprises preparing a green ceramic using a ceramic material containing a pore former and a binder (Col. 3, lines 27ff and Col. 4, lines 35ff). The ceramic material is then dried and fired after being extruded (see abstract). The binder used by Xun is hydroxypropyl methyl cellulose which as defined by applicant has a combustion temperature of 220<sup>°</sup>C.

The firing temperature of Xun has a heating rate no greater than 1<sup>°</sup>C/minute until it reaches 200<sup>°</sup>C which the heating rate is then increased to 2<sup>°</sup>C/minute (Abstract). Hence, as the ceramic is fired and as it reaches the claimed temperature of -50<sup>°</sup>C to +10<sup>°</sup>C range, the combustion temperature of the binder is reached consequently and inherently a burn out of the binder would occur.

As for claim 7, the temperature that ceramic is exposed to is within the claimed - 50<sup>°</sup>C of the combustion temperature as shown above.

As for claims 8-9, see the above cited Col. and lines referencing the binder and pore formers.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carlos Lopez whose telephone number is 571.272.1193. The examiner can normally be reached on Mon.-Fri. 8am - 5pm.
